

Dear Patient,

As long as we and the members of our local government feel that we can keep ourselves and our guests as safe as possible, we want to be here to serve you. So, even though we're living through uncertain and unprecedented times, we have decided to continue our normal operations for the immediate future and are currently open for business.

Please know that when you visit our office, your health and safety are top priorities today and every day. There is a concern among all health care providers in managing patients who are suspected of being infected with the coronavirus.

Since the mid-1980s, health care workers have had guidelines from the U.S. Centers for Disease Control and Prevention and have been updated regularly as new scientific information has become available about the many pathogens in our daily tasks that hold a risk of disease transmission. All of our patients are treated with "standard precautions," the assumption that everyone may be infected with one of the many possible infectious diseases we fear contracting or spreading. These guidelines were developed by the CDC, and subsequently adopted by The American Medical Association.

During this outbreak, we ask that you keep your appointments. Should you need to change your appointments for health reasons, please let us know in advance so we can reschedule you and have our team help other patients.

**We are offering Immunity Boost IV Infusions for 20% off, along with Vitamin D/Amino Acids and Vitamin Injections to strengthen your immune system during this time to encourage our patients to be Proactive in their health and wellness.**

Our IV infusion strengthens your immune system by increasing your CD4 count (a type of white blood cell essential to a healthy immune system), and providing ascorbic acid and B vitamins which also help strengthen the immune system while repairing cells, and boosting energy levels.

**IMPORTANT:** If you are infected with COVID-19 or think you may have been infected, please **contact us in advance** before coming in. This way we can instruct you on where to go and how to proceed for the safety of all.

Please reference the CDC website [ [www.cdc.gov](http://www.cdc.gov) ] for updates.

Yours in Health,

Julie & The Healthy Beginnings Team
